What was the first thing you tried to create with the platform, and what was your motivation (the 'why')?

5 responses

I tried to create two short videos to edit them into one in the studio. My motivation was testing and reviewing the product's capabilities.

I made a video of a cat, because why not?

The first thing I wanted to create with the platform is a guide for a Campaign. My Motivation was make it easier for people that are having difficulties participating in the campaign.

I created a video from an image and added sound because I don’t know of any alternatives with similar functionality.

The first thing I tried to create was a short AI generated video, mainly because the entire interface strongly encourages you to start creating right away. The call to action and layout make it very clear that content generation is the core focus. My motivation was simple. I wanted to quickly test how easy it was to go from idea to finished video inside the platform without overthinking the process.

How does your experience with this platform compare to other workflows you have previously used for creating AI video content?

5 responses

The idea is good, the flow is clear. Keep developing!

It's quite similar, but with the added benefit of registering the IP, it's much more appealing.

It might be because i don't know how to navigate the platform but I feel frustrated, after creating my project in the studio and uploading my videos, I can't figure out what next to do start merging the videos together. Should I mint as an IP first?

I found out that I needed to drag it

Since I hadn't worked with video editors before, it was difficult for me to figure out how to open a video in the editor. It turned out that you just need to drag the video onto the editing timeline. As for the generation and minting process, everything seems fairly intuitive. However, the editor feels a bit lacking in terms of functionality. Although for something simple, it's actually quite good.

There was also an issue with minting — it turns out you need to provide an IPFS API key, otherwise the mint won't go through. It wasn't obvious that this step was mandatory.

It's actually a pretty cool feature to be able to generate a video, generate sound for it, and do everything right there in the editor.

Compared to my previous workflow, this platform feels more integrated but less feature rich. For example I used Envato AI to generate high resolution visuals, then used Veed.io mainly for generating subtitles and Premiere Pro for more advanced control over text, transitions and layering. That process gave me more flexibility and detailed editing options. Here it is simpler and more connected in one place, but I felt some features were missing compared to those tools.

Regarding AI model selection: How did you decide which AI model to use, and was the difference between the available models clear enough?

5 responses

I chose the model randomly. I used the same one for both videos. I didn't see any descriptions of the models or the differences between them in the interface.

I just chose the default model, and while I understand the pricing differences, perhaps we could add a way to showcase what other improvements or differences exist between models?

I picked one randomly, no it wasn't clear enough apart from the pricing i don't know which model is better than which

I based my choice simply on the fact that I had heard some of the names before, that’s all. Besides the price differences, I’d like a bit more information — for example, what each of these models is good or bad at. As someone who isn’t very familiar with the models, it’s hard for me to choose one, so I’d probably just go with the one I’ve heard of before.

I found the number of available AI models a bit overwhelming at first. It was not always clear which model was best suited for my specific goal without prior knowledge or experimentation. It would be very helpful to have an automatic model selection option that recommends or chooses the best model based on the user’s prompt or intended output. That would make the experience faster, more beginner friendly and reduce decision fatigue.

Was there anything specific you wanted to do in the video editor that you were unable to achieve?

5 responses

It would be great to see a collection of transitions/effects and similar layers that can be overlaid or used to smoothly splice two videos together.

Nope, I did what I needed to do!

Yes, i was not able to reduce the volume of the audio in the video I uploaded and I was not able to add transitions between each clip

It's hard for me to answer that question since I don't have any experience with video editors.

Yes, there were several things I was unable to achieve in the editor:

1. There was no option to drag and drop files directly onto the timeline.
2. The playhead does not move with the cursor, which makes precise editing difficult.
3. Only a single timeline track is available, with no overlay or multi layer support.
4. Video playback seems limited to around 6 seconds.
5. The UI feels slightly confusing and not fully intuitive.
6. When trying to generate an image from within the Studio, there was no visible button to proceed.
7. There is no option to add text to the video.

How did the overall editing flow feel compared to video tools you already use (e.g., CapCut, Premiere Pro, Runway, DaVinci Resolve)?

On a scale of 1 to 5, how confident do you feel that you understand what the blockchain registration process actually protects regarding your created content?

What is the one thing that would need to improve significantly for you to use this platform regularly (e.g., weekly or daily)?

5 responses

Smart Enchance Prompt feature based on Project context or even Smarter! :)

I wouldn't need anything specific if I were needing to generate videos regularly!

- Enhance prompt for voice changes the entire text to a different text entirely

I don’t use this functionality very much overall, so I would use it like this as well.

The one thing that would need significant improvement is the video editor functionality. Adding multi layer timelines, drag and drop support, text tools, smoother playback, and better overall responsiveness would make it powerful enough for regular weekly or daily use.

Would you be willing to pay for this service? If yes, please indicate your maximum acceptable monthly price.
